

# Growth Fund (easysselect)

easysselect age bracket (up to 47 years)

Investment update for the year ending 30 June 2019

This update was first made publicly available on 4 November 2019

## What is the purpose of this update?

This document tells you how the mysuper Growth (easysselect) investment option for ages up to 47 (**Investment Option**) has performed and what fees were charged. The document will help you to compare the Investment Option with other investment options and funds. Shamrock Superannuation Limited prepared this update in accordance with the Financial Markets Conduct Act 2013. This information is not audited and may be updated.

## Description of this investment option

The easysselect investment option automatically reduces your investment risk as you get older. easysselect works by investing your retirement savings in one of mysuper's four investment funds depending on your age.

This Investment Option is 100% invested in the mysuper Growth Fund (Fund), which is regarded as providing appropriate levels of risk and return for a person aged up to 47. The Fund is a well-diversified portfolio primarily holding growth assets (i.e. equities) with a small allocation to lower-risk income assets (i.e. fixed interest and cash). The objective of the Fund is to achieve a high level of real returns (in excess of inflation) over the medium to long term (i.e. eight years plus), accepting that over the short term (i.e. one to three years), investment returns could be negative and subject to large variations.

Total value of the investment option	\$23,850,809
Number of investors in the investment option	1,153
The date the investment option started	30 September 2016

## What are the risks of investing?

### Risk indicator for mysuper Growth Fund (easysselect up to 47 years)

The risk indicator is rated from 1 (low) to 7 (high). The rating reflects how much the value of the fund's assets goes up and down. A higher risk generally means higher potential returns over time, but more ups and downs along the way.

To help you clarify your own attitude to risk, you can seek financial advice or work out your risk profile at [sorted.org.nz/calculators/investment-planner](https://sorted.org.nz/calculators/investment-planner)

Note that even the lowest category does not mean a risk-free investment, and there are other risks that are not captured by this rating.

This risk indicator is not a guarantee of an investment option or fund's future performance. The risk indicator is based on the returns data for the 5 years to 30 June 2019. While risk indicators are usually relatively stable, they do shift from time to time. The risk indicator will continue to be updated in future investment option or fund's updates.

See the Product Disclosure Statement (**PDS**) for more information about the risks associated with investing in this investment option.

## How has the investment option performed?

	Average over past 5 years	Past year
<b>Annual return</b> (after deductions for charges and tax)	9.98%	7.13%
<b>Annual return</b> (after deductions for charges but before tax)	10.98%	8.45%
Market index annual return (reflects no deduction for charges and tax)	10.94%	9.29%

Because this Investment Option is 100% invested in the mysuper Growth Fund, the returns for this investment option are the returns for the fund.

The market index annual return is based on a composite index, calculated using the target investment mix weightings of the underlying market indices that the fund invests into as described on the Statement of Investment Policy and Objectives (**SIPO**). Imputation credits are included in the market index.

The market index used for the New Zealand fixed interest asset allocation changed from the Bloomberg NZBond Government 0+ Year Index to the Bloomberg NZBond Composite Bond 0+ Yr Index on 1 January 2019. The change occurred to reflect the broader spectrum of the fixed interest securities on issue in New Zealand.

Additional information about the market index is available in the 'Market Index' document on the Offer Register at [disclose-register.companiesoffice.govt.nz](https://disclose-register.companiesoffice.govt.nz) (search for 'mysuper Superannuation Scheme').

## Annual Return Graph

This shows the return after fund charges and tax for each year ending 30 June for each of the last 10 years ending 30 June. The last bar shows the average annual return since the Fund started, up to 30 June 2019.

**Important:** This does not tell you how the investment option will perform in the future.

## What fees are investors charged?

Investors in the investment option are charged fund charges. In the year to 30 June 2018 these were:

	% of net asset value
<b>Total fund charges</b>	<b>0.29%</b>
Which are made up of:	
<b>Total management and administration charges</b>	<b>0.29%</b>
Including:	
- Manager's basic fee	0.00%
- Other management and administration charges*	0.29%
<b>Total performance based fees**</b>	<b>0.00%</b>

Other charges	Dollar amount per investor or description of how charge is calculated
<b>Other charges</b>	<b>\$0.00</b>

\* The management and administration charges have been reduced by 0.51% by virtue of the Trustee's policy to apply reserve account funds to cover administration expenses. The investment option's total fund charges prior to the reserve account distribution was 0.80%.

\*\* There are no performance fees charged by the investment option.

All fees are inclusive of GST (if any).

Investors may also be charged individual action fees for specific actions or decisions (for example, switching funds).

See the 'Fees' document on the Offer Register at [disclose-register.companiesoffice.govt.nz](https://disclose-register.companiesoffice.govt.nz) (search for 'mysuper Superannuation Scheme') for more information about those fees.

## Example of how this applies to an investor

Small differences in fees and charges can have a big impact on your investment over the long term.

### Example of how this applies to an investor

Ben had \$10,000 in the investment option at the start of the year and did not make any further contributions. At the end of the year, Ben received a return after fund charges were deducted of \$845 (that is 8.45% of his initial \$10,000). Ben also paid \$0.00 in other charges. This gives Ben a total return after fund charges and tax of \$713 for the year.

## What does the investment option invest in?

### Actual investment mix

This shows the types of assets that the Fund invests in.

### Target investment mix

This shows the mix of assets that the Fund generally intends to invest in.

## Top 10 investments
